## HACKLAB DE NMAP

Nmap (Network Mapper) is a free and open-source network scanner created by Gordon Lyon (also known by his pseudonym Fyodor Vaskovich). Nmap is used to discover hosts and services on a computer network by sending packets and analyzing the responses.

Nmap provides a number of features for probing computer networks, including host discovery and service and operating system detection. These features are extensible by scripts that provide more advanced service detection, vulnerability detection, and other features. Nmap can adapt to network conditions including latency and congestion during a scan.

Operating systems used: DEBIAN (Distro KALI LINUX).

### DOWNLOAD:

<https://nmap.org/download.html>

```
root@kali:~# sudo nmap -h
```

```
root@kali:~# sudo nmap -h
Nmap 7.70 ( https://nmap.org )
Usage: nmap [Scan Type(s)] [Options] {target specification}
TARGET SPECIFICATION:
  Can pass hostnames, IP addresses, networks, etc.
  Ex: scanme.nmap.org, microsoft.com/24, 192.168.0.1; 10.0.0-255.1-254
  -iL <inputfilename>: Input from list of hosts/networks
  -iR <num hosts>: Choose random targets
  --exclude <host1[,host2][,host3],...>: Exclude hosts/networks
  --excludefile <exclude_file>: Exclude list from file
HOST DISCOVERY:
```

Nmap Reference Guide: <https://nmap.org/book/man.html>

## Nmap Cheat Sheet

### Target Specification

Switch	Example	Description
	<code>nmap 192.168.1.1</code>	Scan a single IP
	<code>nmap 192.168.1.1 192.168.2.1</code>	Scan specific IPs
	<code>nmap 192.168.1.1-254</code>	Scan a range
	<code>nmap scanme.nmap.org</code>	Scan a domain
	<code>nmap 192.168.1.0/24</code>	Scan using CIDR notation
<code>-iL</code>	<code>nmap -iL targets.txt</code>	Scan targets from a file
<code>-iR</code>	<code>nmap -iR 100</code>	Scan 100 random hosts
<code>--exclude</code>	<code>nmap --exclude 192.168.1.1</code>	Exclude listed hosts

### Scan Techniques

Switch	Example	Description
<code>-sS</code>	<code>nmap 192.168.1.1 -sS</code>	TCP SYN port scan (Default)
<code>-sT</code>	<code>nmap 192.168.1.1 -sT</code>	TCP connect port scan (Default without root privilege)
<code>-sU</code>	<code>nmap 192.168.1.1 -sU</code>	UDP port scan
<code>-sA</code>	<code>nmap 192.168.1.1 -sA</code>	TCP ACK port scan
<code>-sW</code>	<code>nmap 192.168.1.1 -sW</code>	TCP Window port scan

Switch	Example	Description
-sM	nmap 192.168.1.1 -sM	TCP Maimon port scan

## Host Discovery

Switch	Example	Description
-sL	nmap 192.168.1.1-3 -sL	No Scan. List targets only
-sn	nmap 192.168.1.1/24 -sn	Disable port scanning (With ICMP). Host discovery only.
-Pn	nmap 192.168.1.1-5 -Pn	Disable host discovery (No ICMP). Port scan only.
-PA	nmap 192.168.1.1-5 -PA22-25,80	TCP ACK discovery on port x.
Port 80 by default		
-PU	nmap 192.168.1.1-5 -PU53	UDP discovery on port x. Port 40125 by default
-PR	nmap 192.168.1.1-1/24 -PR	ARP discovery on local network
-n	nmap 192.168.1.1 -n	Never do DNS resolution

## Port Specification

Switch	Example	Description
-p	nmap 192.168.1.1 -p 21	Port scan for port x
-p	nmap 192.168.1.1 -p 21-100	Port range
-p	nmap 192.168.1.1 -p U:53,T:21-25,80	Port scan multiple TCP and UDP ports
-p-	nmap 192.168.1.1 -p-	Port scan all ports
-p	nmap 192.168.1.1 -p http,https	Port scan from service name
-F	nmap 192.168.1.1 -F	Fast port scan (100 ports)
--top-ports	nmap 192.168.1.1 --top-ports 2000	Port scan the top x ports
-p-65535	nmap 192.168.1.1 -p-65535	Leaving off initial port in range makes the scan start at port 1
-p0-	nmap 192.168.1.1 -p0-	Leaving off end port in range makes the scan go through to port 65535

## Service and Version Detection

Switch	Example	Description
-sV	<code>nmap 192.168.1.1 -sV</code>	Attempts to determine the version of the service running on port
-sV --version-intensity	<code>nmap 192.168.1.1 -sV --version-intensity 8</code>	Intensity level 0 to 9. Higher number increases possibility of correctness
-sV --version-light	<code>nmap 192.168.1.1 -sV --version-light</code>	Enable light mode. Lower possibility of correctness. Faster
-sV --version-all	<code>nmap 192.168.1.1 -sV --version-all</code>	Enable intensity level 9. Higher possibility of correctness. Slower
-A	<code>nmap 192.168.1.1 -A</code>	Enables OS detection, version detection, script scanning, and traceroute

## OS Detection

Switch	Example	Description
-O	<code>nmap 192.168.1.1 -O</code>	Remote OS detection using TCP/IP stack fingerprinting
-O --osscan-limit	<code>nmap 192.168.1.1 -O --osscan-limit</code>	If at least one open and one closed TCP port are not found it will not try OS detection against host
-O --osscan-guess	<code>nmap 192.168.1.1 -O --osscan-guess</code>	Makes Nmap guess more aggressively
-O --max-os-tries	<code>nmap 192.168.1.1 -O --max-os-tries 1</code>	Set the maximum number x of OS detection tries against a target
-A	<code>nmap 192.168.1.1 -A</code>	Enables OS detection, version detection, script scanning, and traceroute

## Timing and Performance

Switch	Example	Description
-T0	<code>nmap 192.168.1.1 -T0</code>	Paranoid (0) Intrusion Detection System evasion
-T1	<code>nmap 192.168.1.1 -T1</code>	Sneaky (1) Intrusion Detection System evasion
-T2	<code>nmap 192.168.1.1 -T2</code>	Polite (2) slows down the scan to use less bandwidth and use less target machine resources
-T3	<code>nmap 192.168.1.1 -T3</code>	Normal (3) which is default speed
-T4	<code>nmap 192.168.1.1 -T4</code>	Aggressive (4) speeds scans; assumes you are on a reasonably fast and reliable network
-T5	<code>nmap 192.168.1.1 -T5</code>	Insane (5) speeds scan; assumes you are on an extraordinarily fast network

Switch	Example input	Description
<code>--host-timeout &lt;time&gt;</code>	1s; 4m; 2h	Give up on target after this long
<code>--min-rtt-timeout/max-rtt-timeout/initial-rtt-timeout &lt;time&gt;</code>	1s; 4m; 2h	Specifies probe round trip time
<code>--min-hostgroup/max-hostgroup &lt;size&gt;&lt;size&gt;</code>	50; 1024	Parallel host scan group sizes
<code>--min-parallelism/max-parallelism &lt;numprobes&gt;</code>	10; 1	Probe parallelization
<code>--scan-delay/--max-scan-delay &lt;time&gt;</code>	20ms; 2s; 4m; 5h	Adjust delay between probes
<code>--max-retries &lt;tries&gt;</code>	3	Specify the maximum number of port scan probe retransmissions
<code>--min-rate &lt;number&gt;</code>	100	Send packets no slower than <numberr> per second
<code>--max-rate &lt;number&gt;</code>	100	Send packets no faster than <number> per second

## NSE Scripts

Switch	Example	Description
-sC	<code>nmap 192.168.1.1 -sC</code>	Scan with default NSE scripts. Considered useful for discovery and safe
--script default	<code>nmap 192.168.1.1 --script default</code>	Scan with default NSE scripts. Considered useful for discovery and safe
--script	<code>nmap 192.168.1.1 --script=banner</code>	Scan with a single script. Example banner
--script	<code>nmap 192.168.1.1 --script=http*</code>	Scan with a wildcard. Example http
--script	<code>nmap 192.168.1.1 --script=http,banner</code>	Scan with two scripts. Example http and banner
--script	<code>nmap 192.168.1.1 --script "not intrusive"</code>	Scan default, but remove intrusive scripts
--script-args	<code>nmap --script snmp-sysdescr --script-args snmpcommunity=admin 192.168.1.1</code>	NSE script with arguments

## Useful NSE Script Examples

Command	Description
<code>nmap -Pn --script=http-sitemap-generator scanme.nmap.org</code>	http site map generator
<code>nmap -n -Pn -p 80 --open -sV -vvv --script banner,http-title -iR 1000</code>	Fast search for random web servers
<code>nmap -Pn --script=dns-brute domain.com</code>	Brute forces DNS hostnames guessing subdomains
<code>nmap -n -Pn -vv -O -sV --script smb-enum*,smb-ls,smb-mbenum,smb-os-discovery,smb-s*,smb-vuln*,smbv2* -vv 192.168.1.1</code>	Safe SMB scripts to run
<code>nmap --script whois* domain.com</code>	Whois query
<code>nmap -p80 --script http-unsafe-output-escaping scanme.nmap.org</code>	Detect cross site scripting vulnerabilities
<code>nmap -p80 --script http-sql-injection scanme.nmap.org</code>	Check for SQL injections

## Firewall / IDS Evasion and Spoofing

Switch	Example	Description
-f	<code>nmap 192.168.1.1 -f</code>	Requested scan (including ping scans) use tiny fragmented IP packets. Harder for packet filters
--mtu	<code>nmap 192.168.1.1 --mtu 32</code>	Set your own offset size
-D	<code>nmap -D 192.168.1.101,192.168.1.102,192.168.1.103,192.168.1.23 192.168.1.1</code>	
Send scans from spoofed IPs		
-D	<code>nmap -D decoy-ip1,decoy-ip2,your-own-ip,decoy-ip3,decoy-ip4 remote-host-ip</code>	Above example explained
-S	<code>nmap -S <a href="http://www.microsoft.com">www.microsoft.com</a> <a href="http://www.facebook.com">www.facebook.com</a></code>	Scan Facebook from Microsoft (-e eth0 -Pn may be required)
-g	<code>nmap -g 53 192.168.1.1</code>	Use given source port number
--proxies	<code>nmap --proxies <a href="http://192.168.1.1:8080">http://192.168.1.1:8080</a>, <a href="http://192.168.1.2:8080">http://192.168.1.2:8080</a> 192.168.1.1</code>	Relay connections through HTTP/SOCKS4 proxies
--data-length	<code>nmap --data-length 200 192.168.1.1</code>	Appends random data to sent packets

Example IDS Evasion command:

```
nmap -f -t 0 -n -Pn -data-length 200 -D  
192.168.1.101,192.168.1.102,192.168.1.103,192.168.1.23 192.168.1.1
```

## Output

Switch	Example	Description
-oN	nmap 192.168.1.1 -oN normal.file	Normal output to the file normal.file
-oX	nmap 192.168.1.1 -oX xml.file	XML output to the file xml.file
-oG	nmap 192.168.1.1 -oG grep.file	Grepable output to the file grep.file
-oA	nmap 192.168.1.1 -oA results	Output in the three major formats at once
-oG -	nmap 192.168.1.1 -oG -	Grepable output to screen. -oN -, -oX - also usable
--append-output	nmap 192.168.1.1 -oN file.file - -append-output	Append a scan to a previous scan file
-v	nmap 192.168.1.1 -v	Increase the verbosity level (use -vv or more for greater effect)
-d	nmap 192.168.1.1 -d	Increase debugging level (use -dd or more for greater effect)

Switch	Example	Description
--reason	<code>nmap 192.168.1.1 --reason</code>	Display the reason a port is in a particular state, same output as -vv
--open	<code>nmap 192.168.1.1 --open</code>	Only show open (or possibly open) ports
--packet-trace	<code>nmap 192.168.1.1 -T4 --packet-trace</code>	Show all packets sent and received
--iflist	<code>nmap --iflist</code>	Shows the host interfaces and routes
--resume	<code>nmap --resume results.file</code>	Resume a scan

## Helpful Nmap Output examples

Command	Description
<code>nmap -p80 -sV -oG - --open 192.168.1.1/24</code>	<code>grep open</code>
<code>nmap -iR 10 -n -oX out.xml</code>	<code>grep "Nmap"</code>
<code>nmap -iR 10 -n -oX out2.xml</code>	<code>grep "Nmap"</code>
<code>ndiff scan1.xml scan2.xml</code>	Compare output from nmap using the ndif
<code>xsltproc nmap.xml -o nmap.html</code>	Convert nmap xml files to html files
<code>grep " open " results.nmap</code>	<code>sed -r 's/ +/ /g'</code>

## Miscellaneous Options

Switch	Example	Description
-6	<code>nmap -6 2607:f0d0:1002:51::4</code>	Enable IPv6 scanning
-h	<code>nmap -h</code>	nmap help screen

## Other Useful Nmap Commands

Command	Description
<code>nmap -iR 10 -PS22-25,80,113,1050,35000 -v -sn</code>	Discovery only on ports x, no port scan
<code>nmap 192.168.1.1-1/24 -PR -sn -vv</code>	Arp discovery only on local network, no port scan
<code>nmap -iR 10 -sn -traceroute</code>	Traceroute to random targets, no port scan
<code>nmap 192.168.1.1-50 -sL --dns-server 192.168.1.1</code>	Query the Internal DNS for hosts, list targets only.

## CHackA Nmap Commands

---

### **nmap Scripts:**

```
root@kali:~$ cd /usr/share/nmap/scripts
root@kali:/usr/share/nmap/scripts# wget -r -np -nH --cut-dirs=3 -R index.html
https://svn.nmap.org/nmap/scripts/
root@kali:/usr/share/nmap/scripts# sudo nmap --script-updatedb
```

### **Recon OS:**

```
root@kali:~/Desktop/chacka/nmap# nmap -sS -A -v -v -v -n 10.11.1.0/24
root@kali:~/Desktop/chacka/nmap# nmap -p 139,445 --script-args=unsafe=1 --script
/usr/share/nmap/scripts/smb-os-discovery 10.11.1.0/2
```

### **Scan Vulnerability:**

```
kali@kali:~$ sudo nmap -vvv -p 1-65535 --script=*-vuln-* 192.168.0.7
kali@kali:~$ sudo nmap -vvv -n -Pn -p 1-65535 --script=*-vuln-* 10.11.1.0/24
kali@kali:~$ sudo nmap -n -Pn -p 139,445 --script=*-vuln-* 10.11.1.5 (One Target,
specific ports)
kali@kali:~$ sudo nmap -n -Pn -p 139,445 --script=*-vuln-* --script-args=unsafe=1
10.11.1.5 (One Target, specific ports)
```
